

Puzzle 209 | from digit exchanges to the 7 -> 3 transition at r3c2 (T-3)

Starting board: T-16

6	9	1	3	2	8	4	7	5
5	8	2	4	7	9	6	1	3
3	7	4	1	5	6	8	9	2
4	5	9	7	8	1	5	3	6
2	3	7	6	9	4	5	8	1
1	6	8	2	3	5	9	4	7
9	1	5	2	4	7	3	6	8
8	4	3	5	1	2	7	6	9
7	2	6	9	6	3	1	5	4

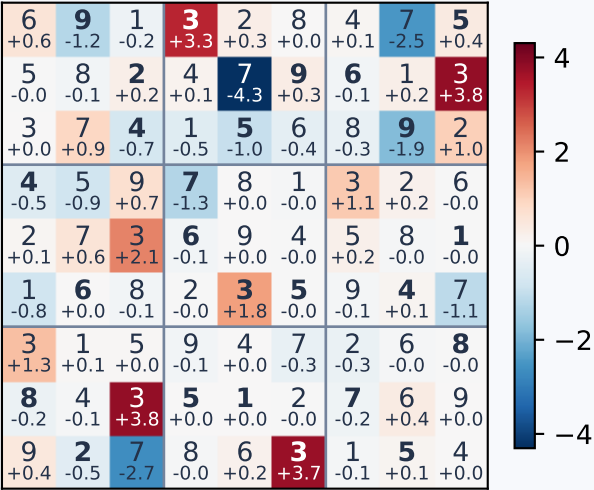

Before focused block: T-4

6	9	1	3	2	8	4	7	5
5	8	2	4	7	9	6	1	3
3	7	4	1	5	6	8	9	2
4	5	9	7	8	1	3	2	6
2	7	3	6	9	4	5	8	1
1	6	8	2	3	5	9	4	7
3	1	5	9	4	7	2	6	8
8	4	3	5	1	2	7	6	9
9	2	7	8	6	3	1	5	4

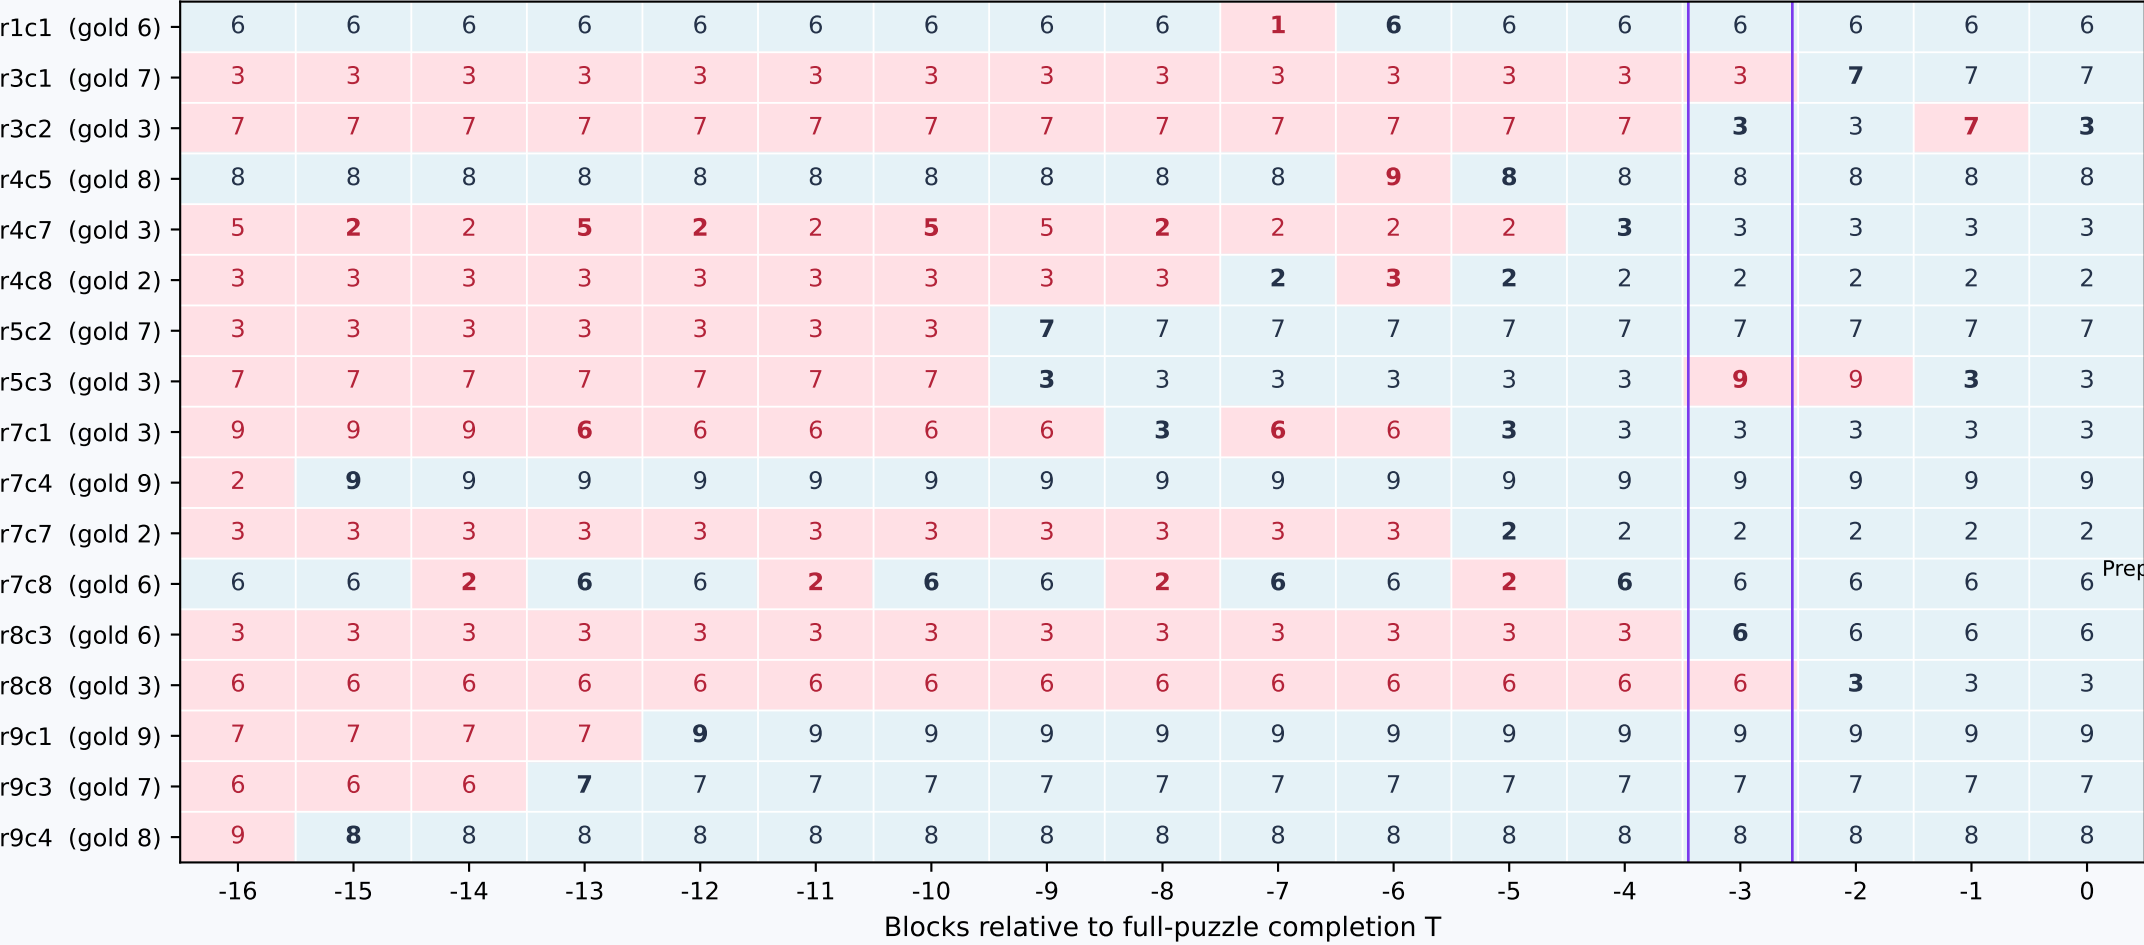

After focused block: T-3

6	9	1	3	2	8	4	7	5
5	8	2	4	7	9	6	1	3
3	3	4	1	5	6	8	9	2
4	5	9	7	8	1	3	2	6
2	7	9	6	9	4	5	8	1
1	6	8	2	3	5	9	4	7
3	1	5	9	4	7	2	6	8
8	4	6	5	1	2	7	6	9
9	2	7	8	6	3	1	5	4

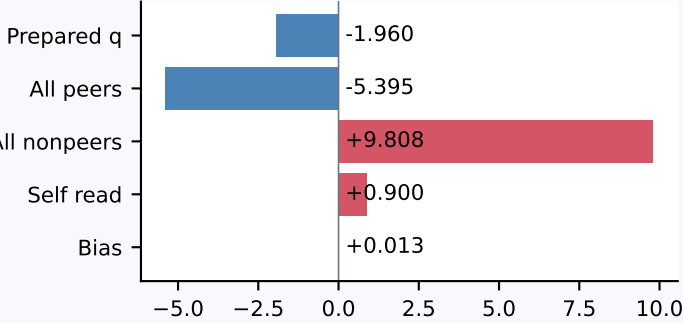

All-head messages to r3c2
Digit 3 minus 7; each tile = one source

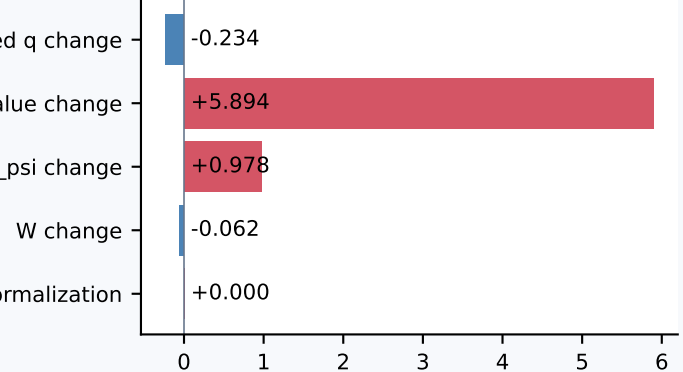

Every cell that is wrong at least once in this window | pink: wrong; blue: correct; bold: changed

Current 3-7 margin = +3.366

Margin change: -3.210 -> +3.366

Message tiles sum all 8 heads and use the actual output normalization. Positive favors the new digit over the old digit. These are normal-trajectory contributions, not intervention effects.
