

Puzzle 58 | from digit exchanges to the 8 -> 6 transition at r3c9 (T+0)

Starting board: T-16

6	7	8	3	4	1	5	2	7
5	2	3	8	6	9	4	7	1
1	4	9	5	2	7	3	6	8
6	5	6	9	3	4	8	1	7
3	1	4	6	1	9	2	7	5
8	1	2	1	7	5	9	3	4
4	3	9	7	5	2	1	8	9
2	8	1	4	9	6	2	5	3
2	6	5	1	1	3	7	9	2

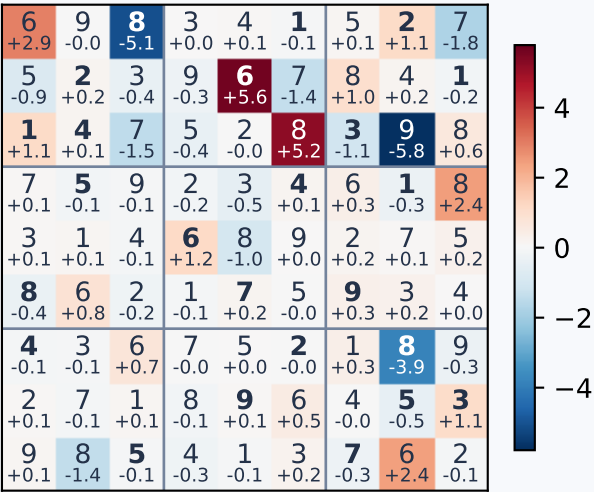

Before focused block: T-1

6	9	8	3	4	1	5	2	7
5	2	3	9	6	7	8	4	1
1	4	7	5	2	8	3	9	8
7	5	9	2	3	4	6	1	8
3	1	4	6	8	9	2	7	5
8	6	2	1	7	5	9	3	4
4	3	6	7	5	2	1	8	9
2	7	1	8	9	6	4	5	3
9	8	5	4	1	3	7	6	2

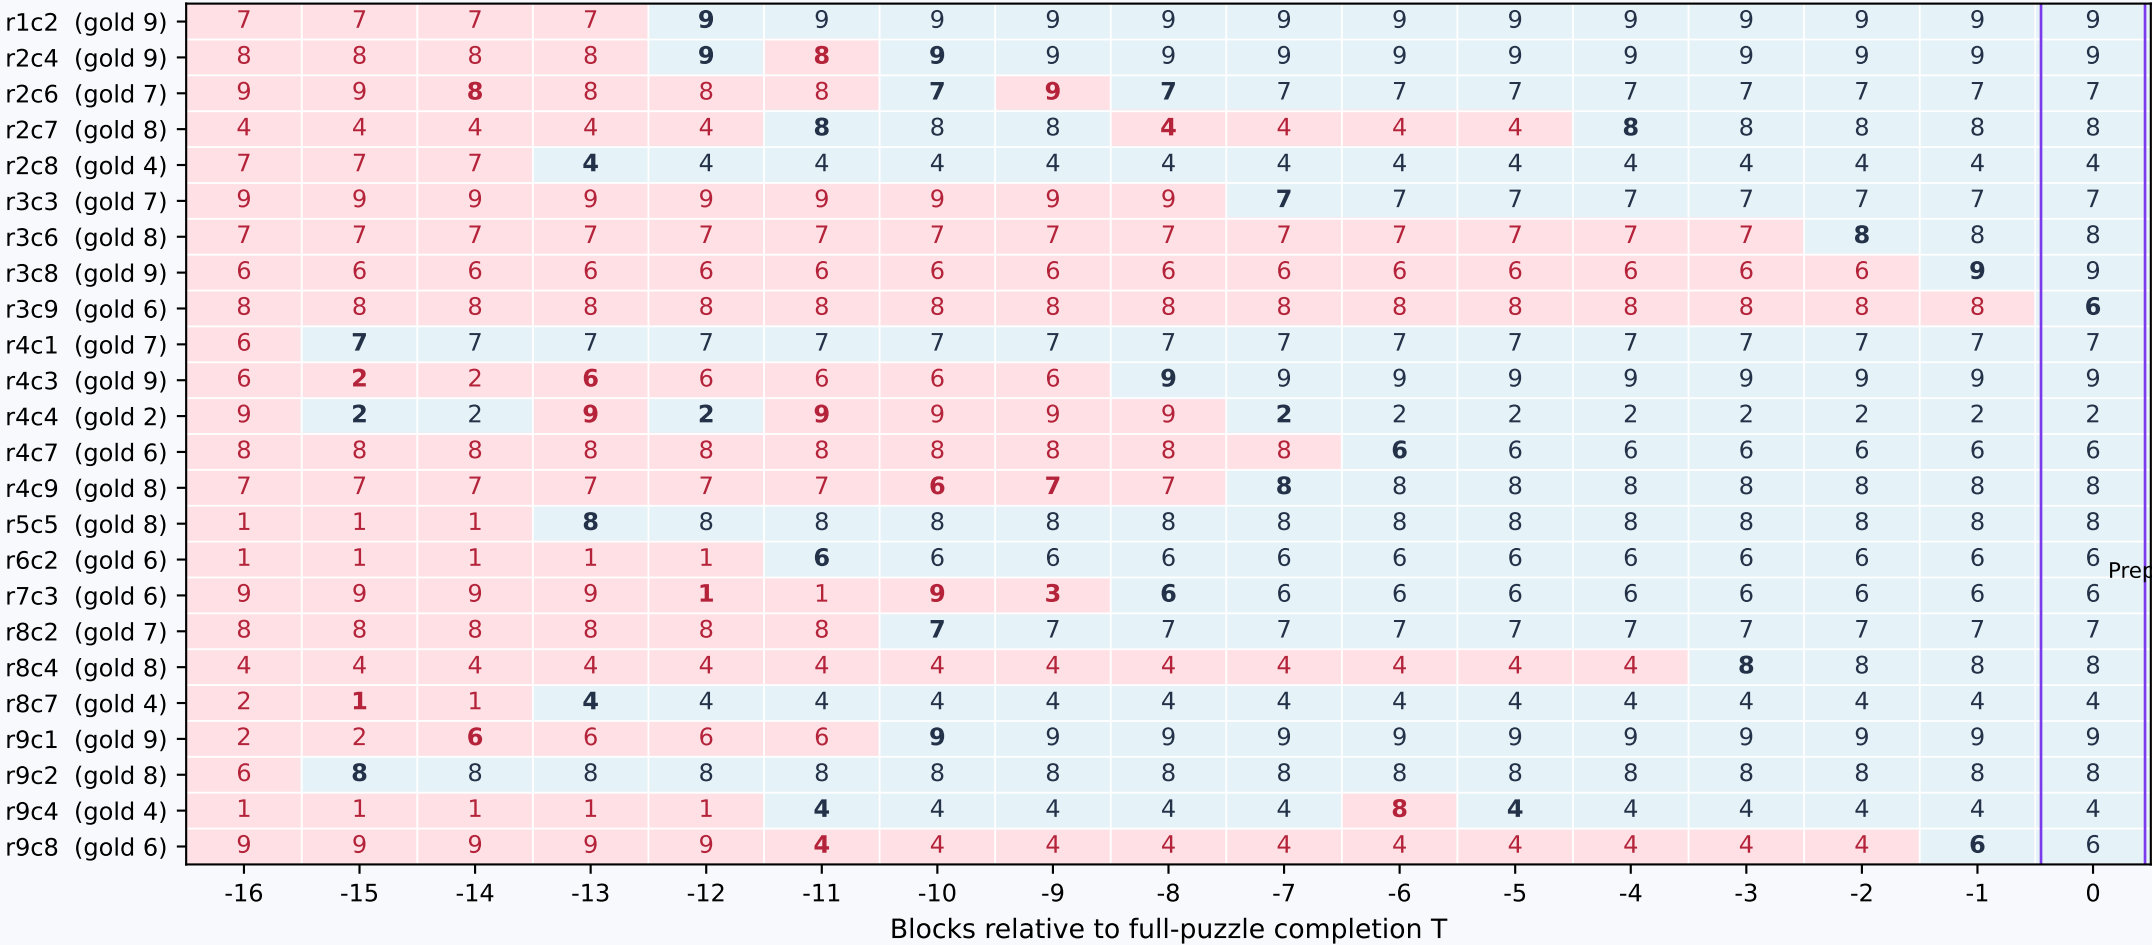

After focused block: T+0

6	9	8	3	4	1	5	2	7
5	2	3	9	6	7	8	4	1
1	4	7	5	2	8	3	9	6
7	5	9	2	3	4	6	1	8
3	1	4	6	8	9	2	7	5
8	6	2	1	7	5	9	3	4
4	3	6	7	5	2	1	8	9
2	7	1	8	9	6	4	5	3
9	8	5	4	1	3	7	6	2

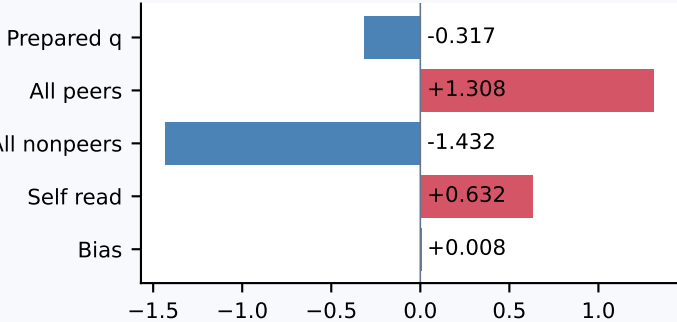

All-head messages to r3c9
Digit 6 minus 8; each tile = one source

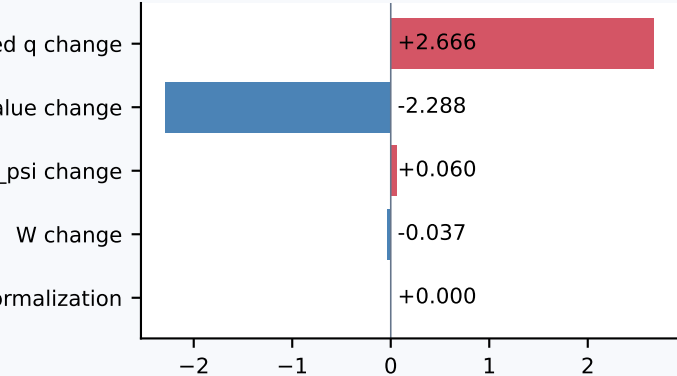

Every cell that is wrong at least once in this window | pink: wrong; blue: correct; bold: changed

Current 6-8 margin = +0.201

Margin change: -0.199 -> +0.201

Message tiles sum all 8 heads and use the actual output normalization. Positive favors the new digit over the old digit. These are normal-trajectory contributions, not intervention effects.
